MEDICAL

## WHAT IS FAT FREEZING?

### HOW DOES CoolTech® WORK?

CoolTech® reduces fat tissue using a controlled cooling system. It is a non-invasive procedure and it is fast, safe and effective.

The handpiece vacuums the chosen area, creating a vacuum effect that reduces blood flow momentarily cooling the fat tissue and thus causing cell death.

The fat cells in the treated area are gradually eliminated through the normal metabolism process via the lymphatic system.

### WHEN WILL THE RESULTS BE VISIBLE?

With only one treatment the results will be visible after 15 days and optimal results will be seen after the first 12 weeks.

### HOW MANY SESSIONS WILL I NEED?

1-3 sessions in the same area every 6-8 weeks.

### HOW LONG DOES THE TREATMENT LAST?

We recommend a 70 minute treatment session for each area treated.

### CoolTech® treatment:

### WHAT AREAS CAN BE TREATED?

- > Abdomen > Love handles > Inner & outer thighs
- > Back rolls > Inner & outer knees > Lower buttocks

### HOW LONG DOES RECOVERY TAKE?

The procedure allows the patients to return to their daily activity immediately. As the procedure is non-invasive, there is no need for any recovery time.

### WHAT ARE THE BENEFITS OF THE TREATMENT?

- > **Effective** and **safe** therapy.
- > **Non-invasive** and **pain free**.
- > Visible results after just one procedure.
- > Final reduction of adipose tissue is permanent.
- > No downtime or drugs required after treatment.
- > No exercise or diet required after treatment.

## BEFORE AND AFTER
